

# HUNTER VALLEY OPERATIONS

---

## Monthly Environmental Monitoring Report December 2021

**Document Number:** HVOOC-1797567310-4062

**Status:** Approved

**Version:** 1.0

**Effective:** 02/05/2022

**Owner:** Environment and Community Coordinator

## Table of Contents

<b>1</b>	<b>Introduction .....</b>	<b>5</b>
<b>2</b>	<b>Air Quality .....</b>	<b>5</b>
2.1	Meteorological Monitoring .....	5
2.1.1	Rainfall .....	5
2.1.2	Wind Speed and Direction .....	7
2.2	Depositional Dust.....	9
2.3	Suspended Particles.....	10
2.3.1	HVAS PM <sub>10</sub> Results .....	10
2.3.2	HVAS PM <sub>2.5</sub> Results.....	12
2.3.3	TSP Results .....	14
2.3.4	Real Time PM <sub>10</sub> Results.....	15
2.3.5	Real Time Alarms for Air Quality .....	16
<b>3</b>	<b>Water Quality .....</b>	<b>17</b>
3.1	Surface Water.....	17
3.1.1	Surface Water Trigger Tracking .....	25
3.2	Site Water Use.....	26
3.3	HRSTS Discharge .....	27
3.4	Groundwater Monitoring Results .....	27
3.4.1	Groundwater Trigger Tracking .....	47
<b>4</b>	<b>Blasting.....</b>	<b>48</b>
4.1	Blast Monitoring Results.....	49
<b>5</b>	<b>Noise .....</b>	<b>52</b>
5.1	Attended Noise Monitoring Results .....	52
5.2	Low Frequency Assessment .....	58
5.3	Real Time Noise Monitoring .....	60
<b>6</b>	<b>Operational Downtime .....</b>	<b>61</b>
<b>7</b>	<b>Rehabilitation .....</b>	<b>62</b>
<b>8</b>	<b>Complaints .....</b>	<b>63</b>
<b>9</b>	<b>Environmental Incidents .....</b>	<b>64</b>

# 1 Introduction

This report has been compiled to provide a monthly summary of environmental monitoring results for Hunter Valley Operations (HVO). This report includes all monitoring data collected for the period 1 to 31 December 2021 (the 'Reporting Period').

## 2 Air Quality

### 2.1 Meteorological Monitoring

HVO maintains two meteorological stations: 'HVO Corporate' and 'Cheshunt' (refer to **Figure 4**)

#### 2.1.1 Rainfall

Rainfall for the period is summarised in **Table 1**. The 2019, 2020 and 2021 trends are shown in **Figure 1**.

**Table 1 - Rainfall data for the Reporting Period**

2021	Monthly Rainfall (mm)	Cumulative Rainfall (mm)
January	50.6	50.6
February	106.4	157.0
March	178.0	335.0
April	12.8	347.8
May	28.2	376
June	60.2	436.2
July	22.8	459.0
August	38.0	497.0
September	26.0	523.0
October	56.2	579.2
November	226.0	805.2
December	105.0	910.2

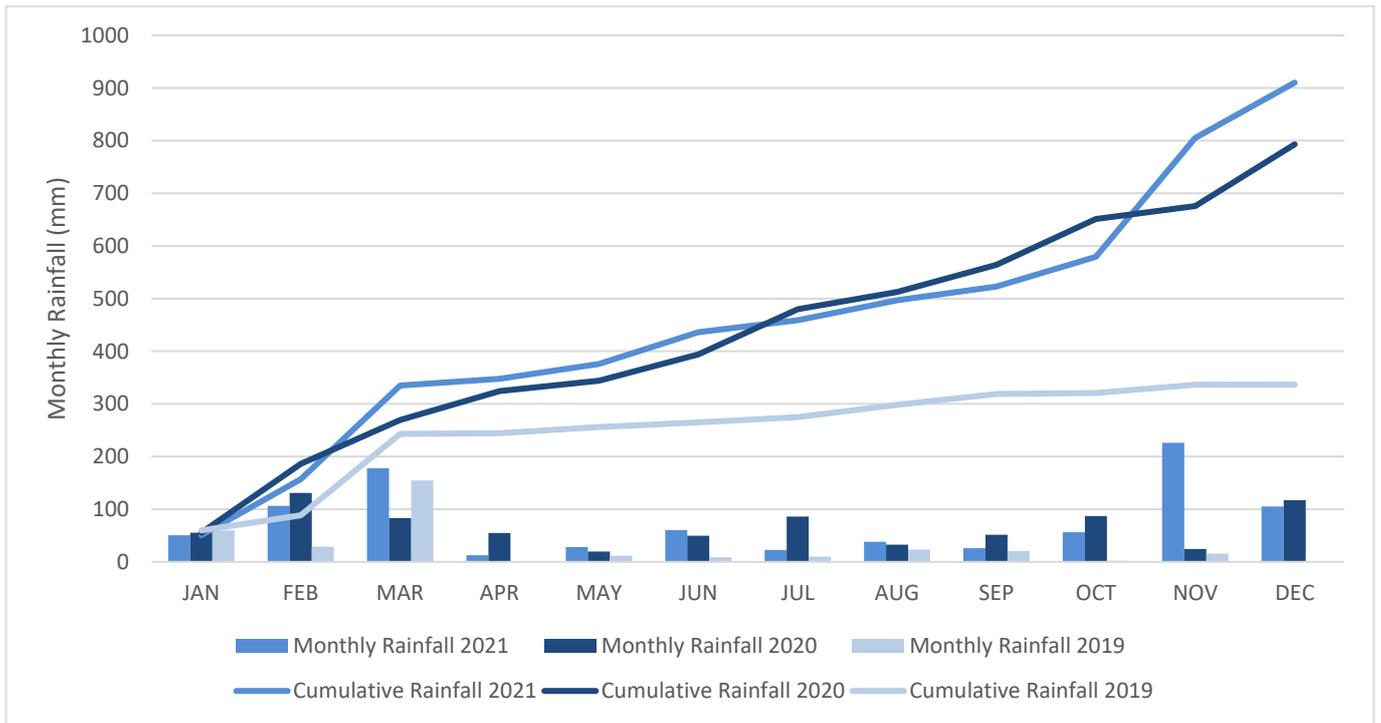

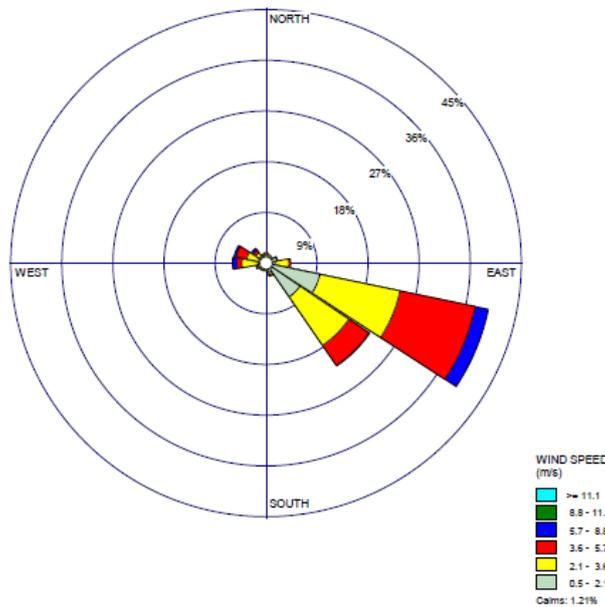

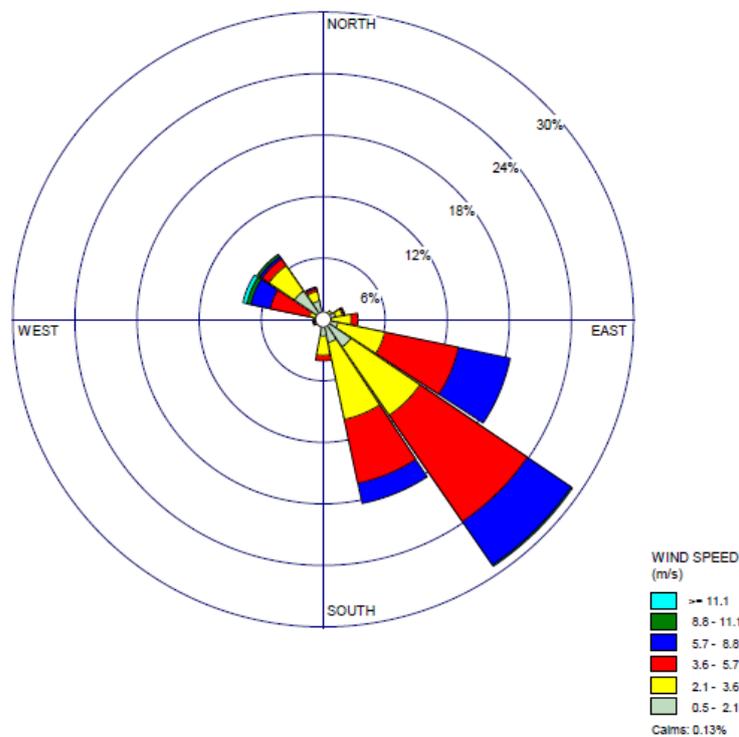

Figure 1 - Rainfall Summary 2021

## 2.1.2 Wind Speed and Direction

South easterly winds were prevailing during the reporting period as shown in **Figure 2** (HVO Corporate) and **Figure 3** (HVO Cheshunt).

**Figure 2 - HVO Corporate Wind Rose for the Reporting Period**

**Figure 3 - HVO Cheshunt Wind Rose for the Reporting Period**

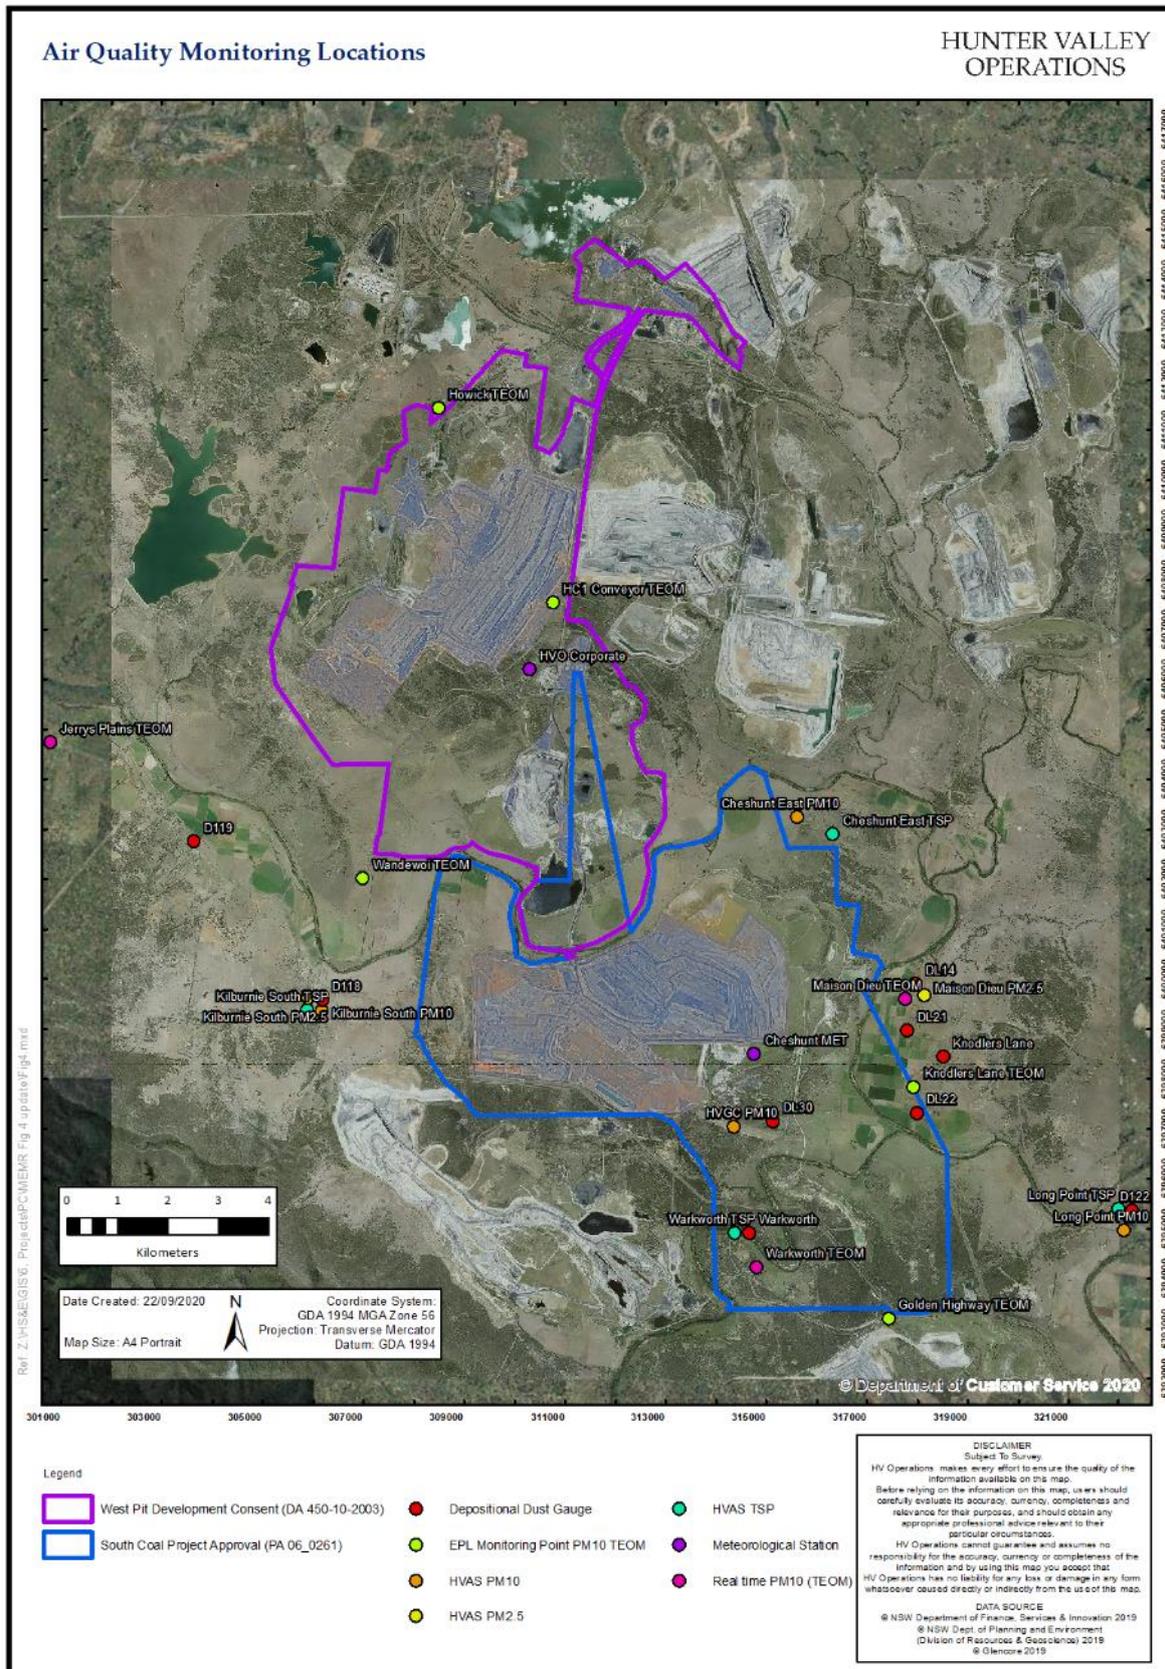

Figure 4 - Air Quality Monitoring Location Plan

## 2.2 Depositional Dust

HVO operates and maintains a network of nine depositional dust gauges situated on private and mine owned land surrounding HVO to monitor regional air quality.

**Figure 5** displays insoluble solids results from depositional dust gauges during the reporting period compared against the annual impact assessment criteria. Any monthly results deemed to be contaminated (due to presence of bird droppings, insects, etc.) are not displayed. An assessment of HVO’s contribution against the long-term impact assessment criteria will be provided in the 2021 Annual Review.

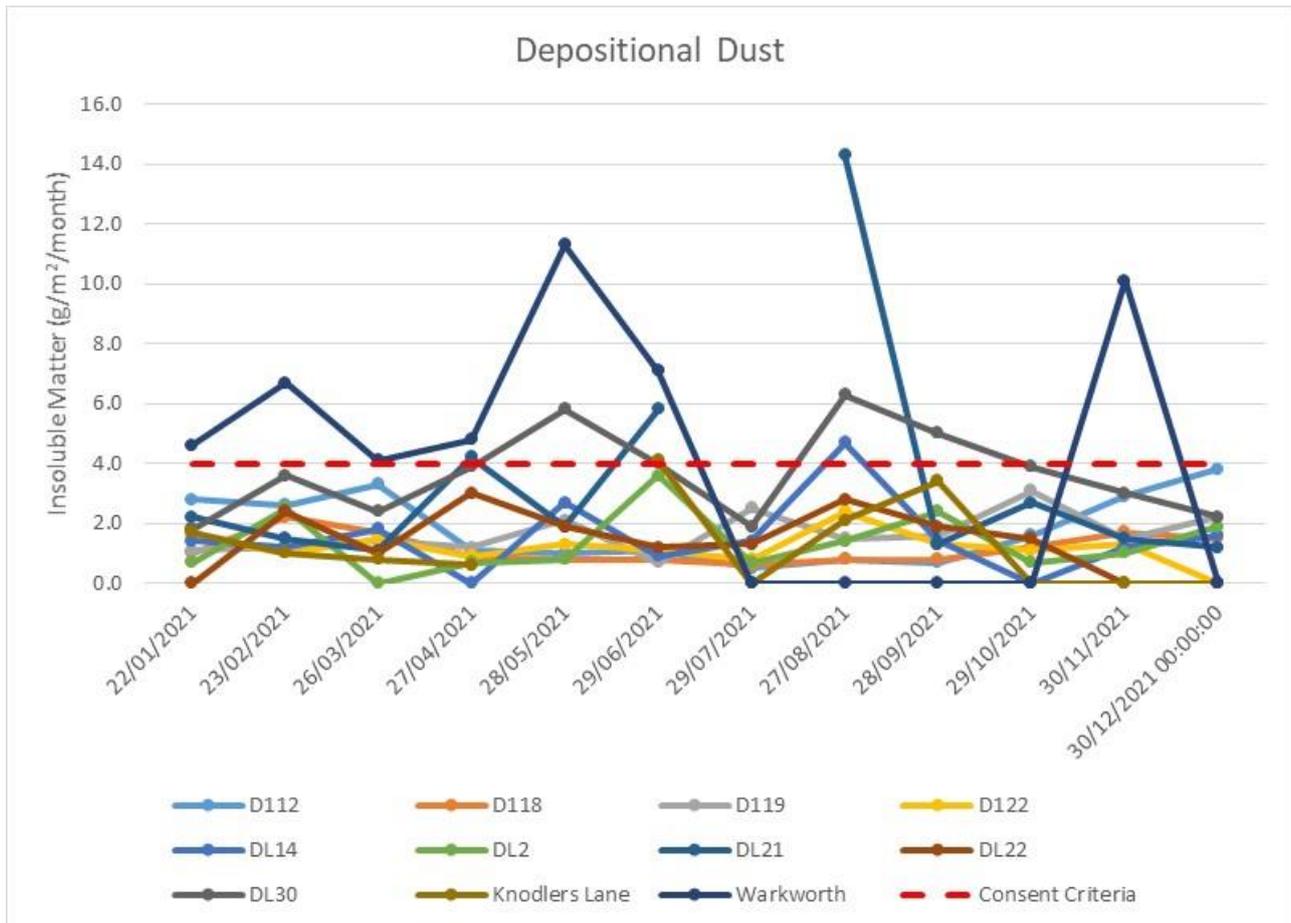

Figure 5 - Depositional Dust Results for the Reporting Period

## 2.3 Suspended Particles

Suspended particles are measured by a network of High Volume Air Samplers (HVAS) measuring Total Suspended Particulates (TSP) and Particulate Matter <10µm (PM<sub>10</sub>). The Kilburnie South and Maison Dieu HVAS also monitor Particulate Matter <2.5µm (PM<sub>2.5</sub>). The location of these monitors can be seen in Figure 4. Each HVAS runs for 24-hours on a six-day cycle.

### 2.3.1 HVAS PM<sub>10</sub> Results

#### 2.3.1.1 Performance against short term impact assessment criteria

Figure 6 shows individual PM<sub>10</sub> results at each monitoring station against the short-term impact assessment criteria of 50µg/m<sup>3</sup>. No exceedances were recorded.

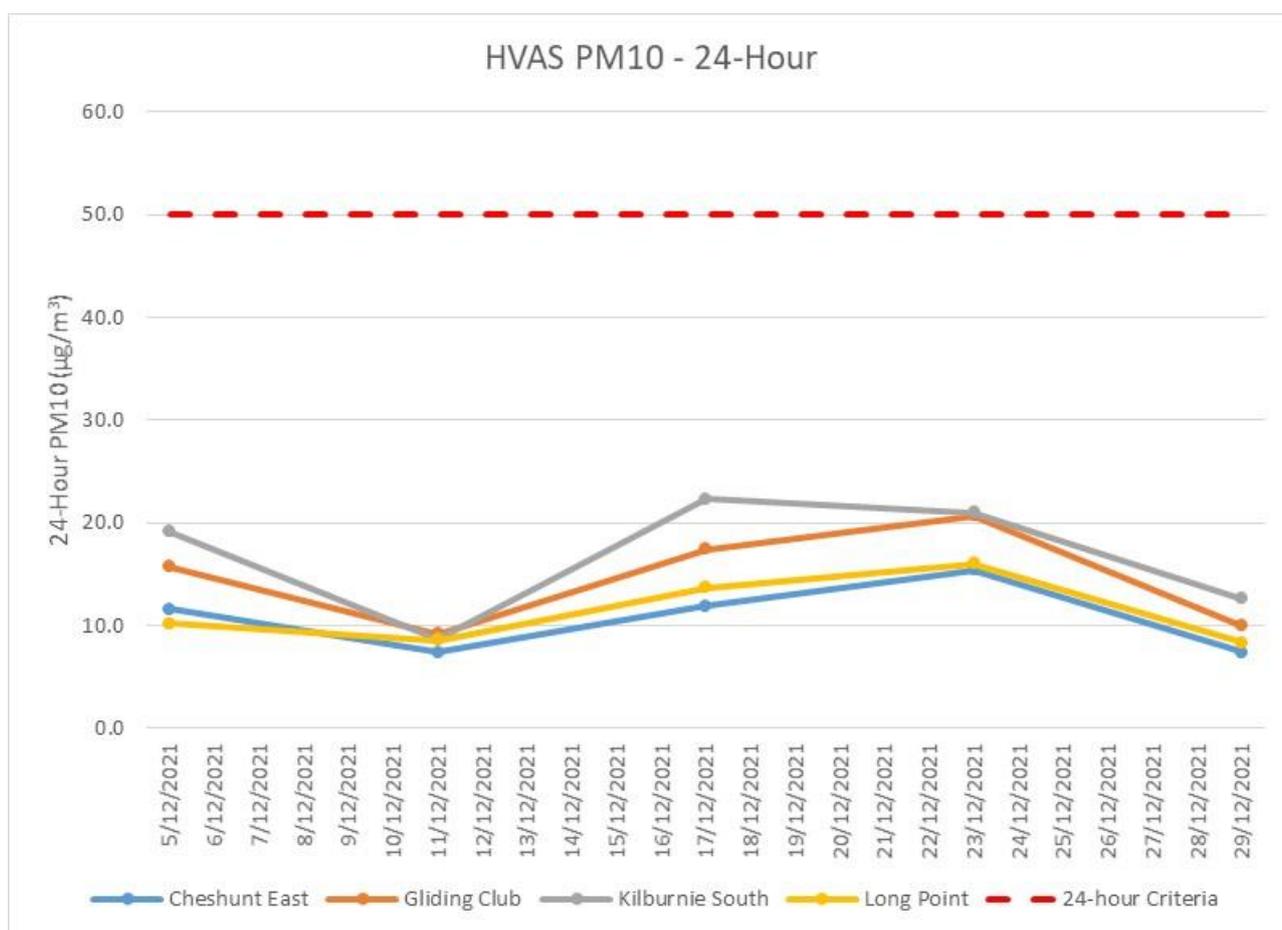

Figure 6 - Individual PM<sub>10</sub> Results for the Reporting Period

### 2.3.1.2 Performance against long term impact assessment criteria

Figure 7 shows the year to date annual average PM<sub>10</sub> results. All monitors were below the relevant long term impact assessment criteria during the reporting period. An assessment of HVO’s contribution against the long-term impact assessment criteria will be provided in the 2021 Annual Review.

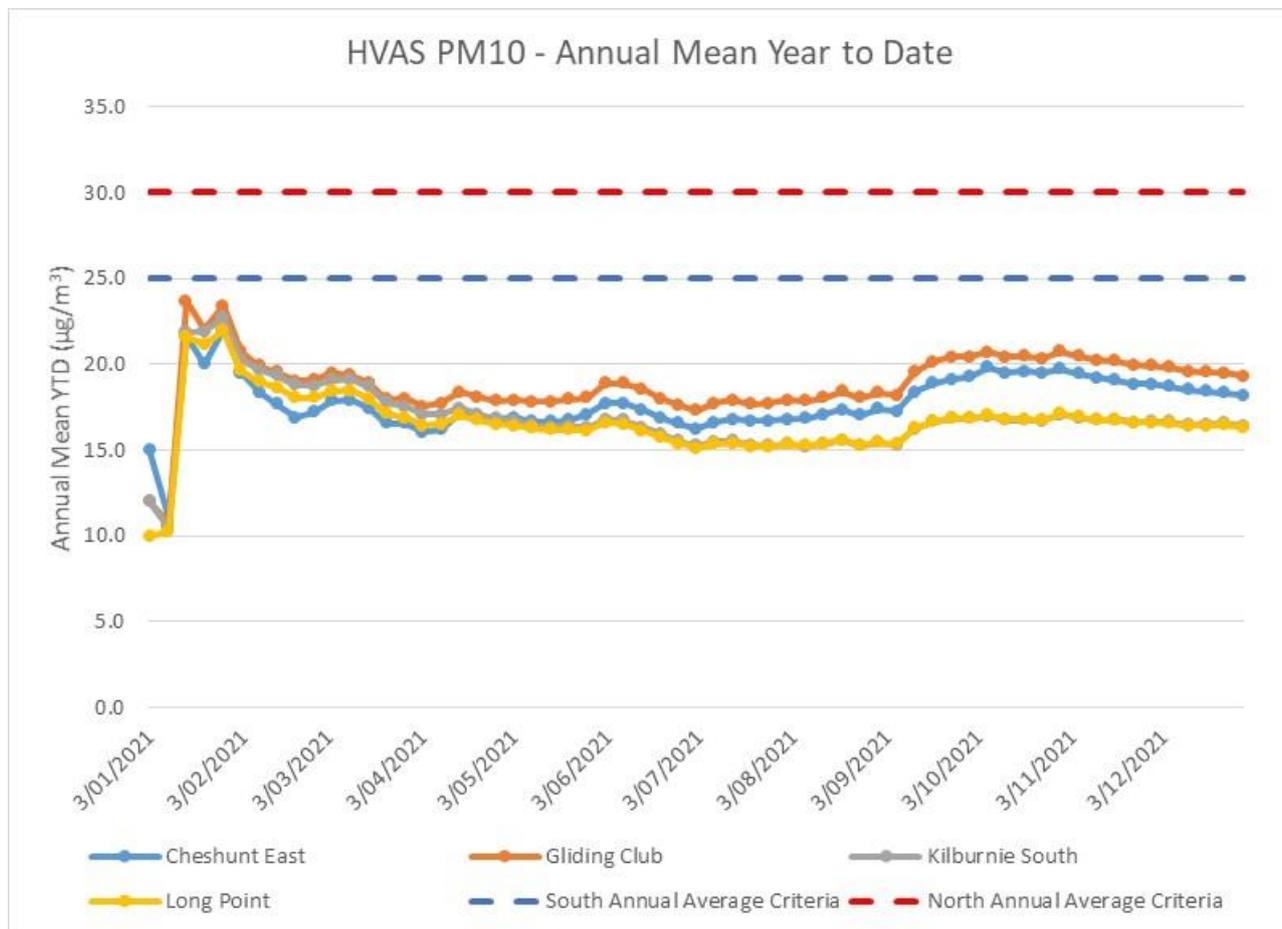

Figure 7 - Year to Date Average PM<sub>10</sub> as at end of the Reporting Period

## 2.3.2 HVAS PM<sub>2.5</sub> Results

HVO monitors PM<sub>2.5</sub> at two HVAS locations, Kilburnie South and Maison Dieu.

### 2.3.2.1 Performance against short term impact assessment criteria

Figure 8 shows individual PM<sub>2.5</sub> results at each monitoring station against the HVO South short-term impact assessment criteria of 25µg/m<sup>3</sup>. No exceedances were recorded.

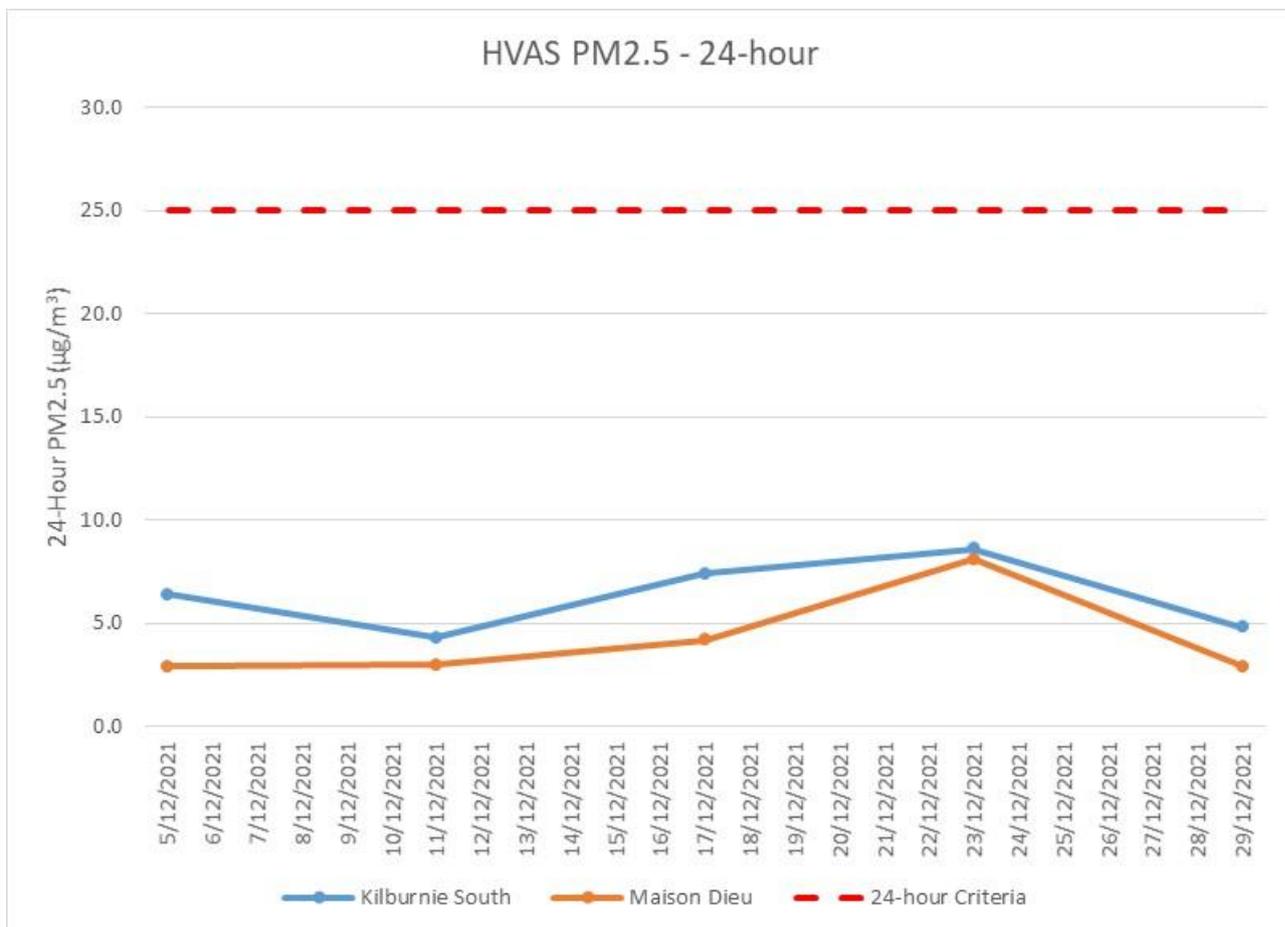

Figure 8 - Individual PM<sub>2.5</sub> Results for the Reporting Period

### 2.3.2.2 Performance against long term impact assessment criteria

Figure 9 shows the year to date annual average PM<sub>2.5</sub> results. Maison Dieu recorded an annual average exceedance above the PM<sub>2.5</sub> Annual Rolling Mean criteria of 8µg/m<sup>3</sup>.

An assessment of HVO’s contribution against the long term impact assessment criteria will be provided in the 2021 Annual Review.

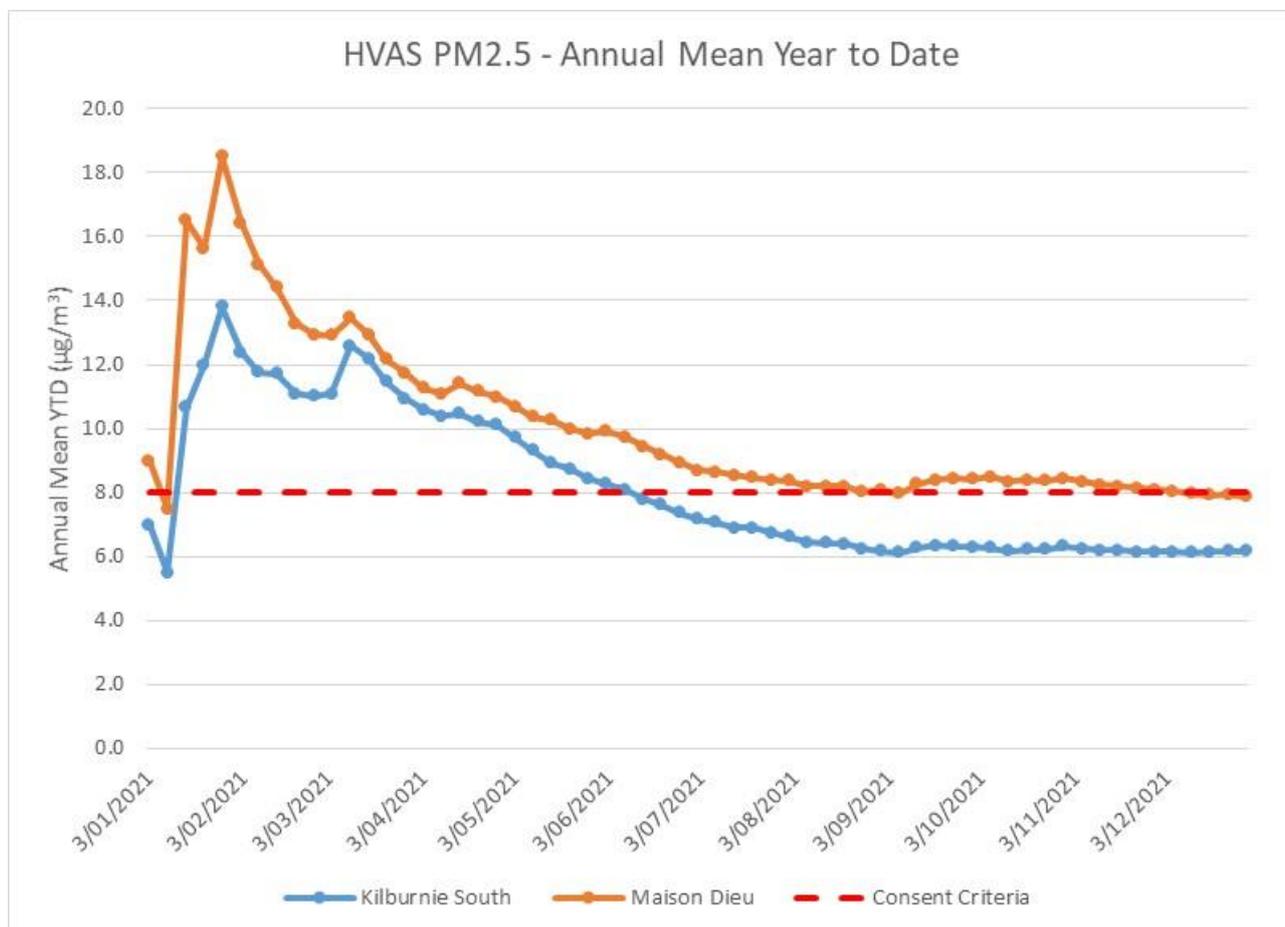

Figure 9 - Year to Date Average PM<sub>2.5</sub> as at end of the Reporting Period

## 2.3.3 TSP Results

### 2.3.3.1 Performance against long term impact assessment criteria

Figure 10 shows the annual average TSP results compared against the long-term impact assessment criteria of 90µg/m<sup>3</sup>.

All monitors except for Warkworth were below the relevant long-term impact assessment criteria during the reporting period.

An assessment of HVO’s contribution against the long-term impact assessment criteria will be provided in the 2021 Annual Review.

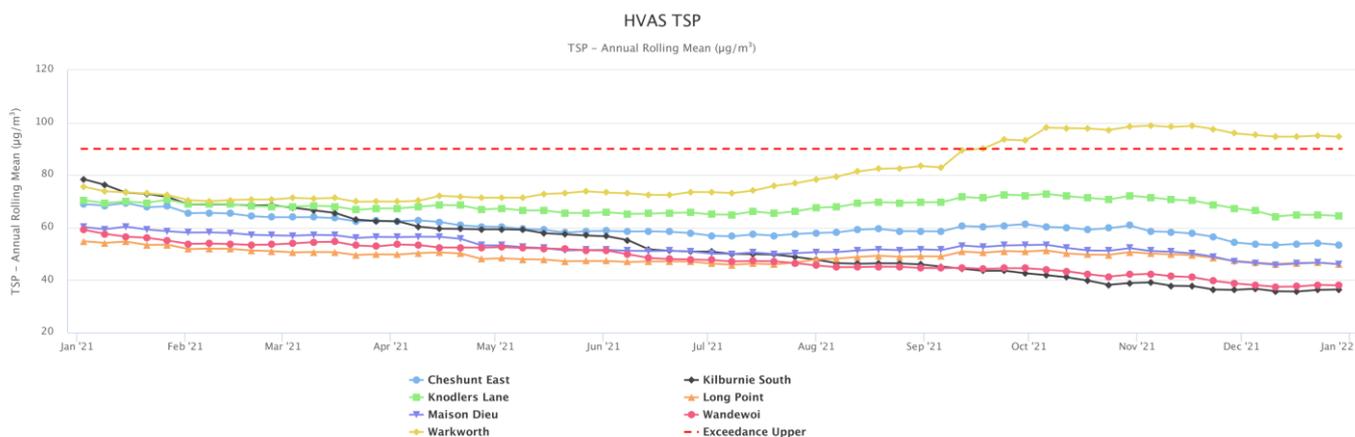

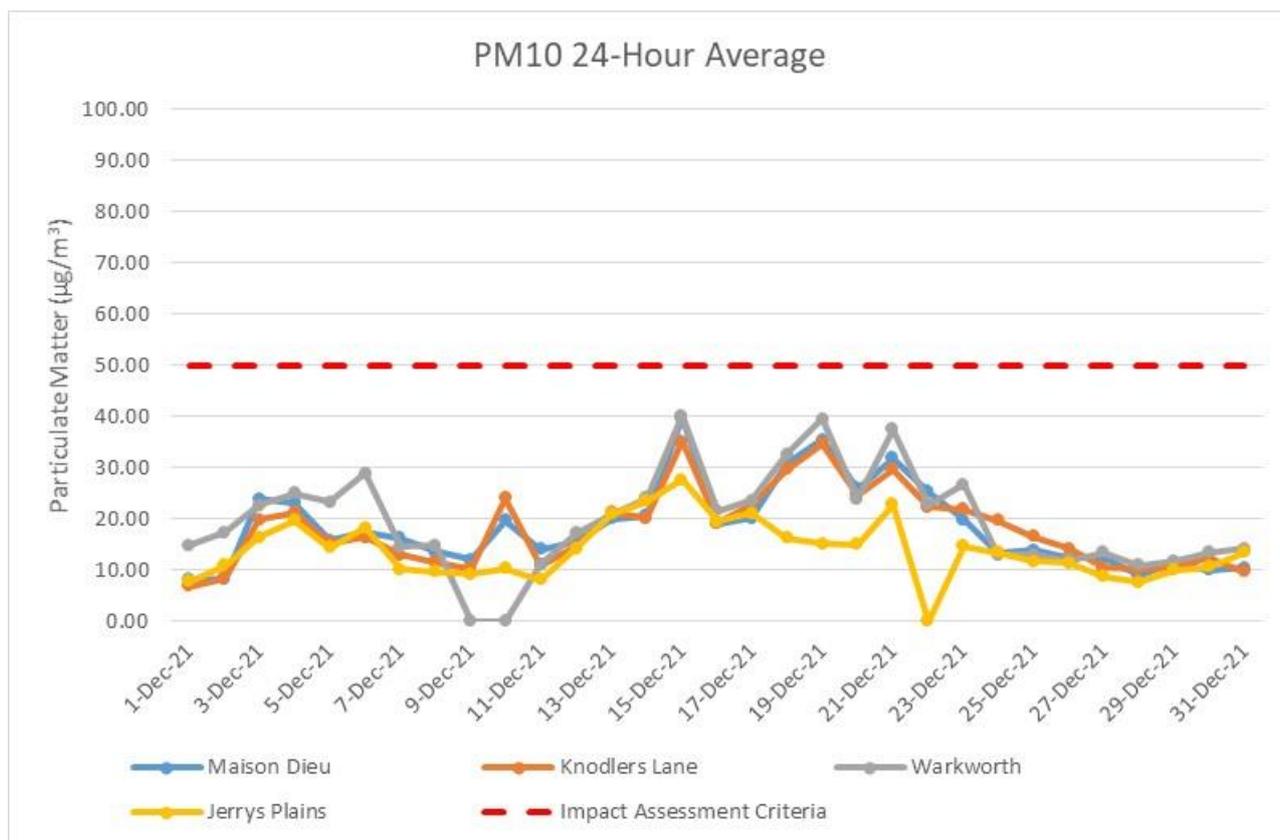

Figure 10 - Year to Date Average Total Suspended Particulates as at end of the Reporting Period

## 2.3.4 Real Time PM<sub>10</sub> Results

HVO maintains a network of real time PM<sub>10</sub> monitors. The real time air quality monitoring stations continuously record information and transmit data to a central database, generating alarms when particulate matter levels exceed internal trigger levels. Results from real time PM<sub>10</sub> monitoring are used as a reactive measure to guide mining operations to help achieve compliance with the relevant conditions of the project approval.

**Figure 11** shows the daily 24-hour average PM<sub>10</sub> result from the real time monitoring sites which shows no exceedances for the reporting period. The year to date annual averages for each monitoring site are shown in **Figure 12**.

**Figure 11 - Real Time PM<sub>10</sub> 24hr for the Reporting Period**

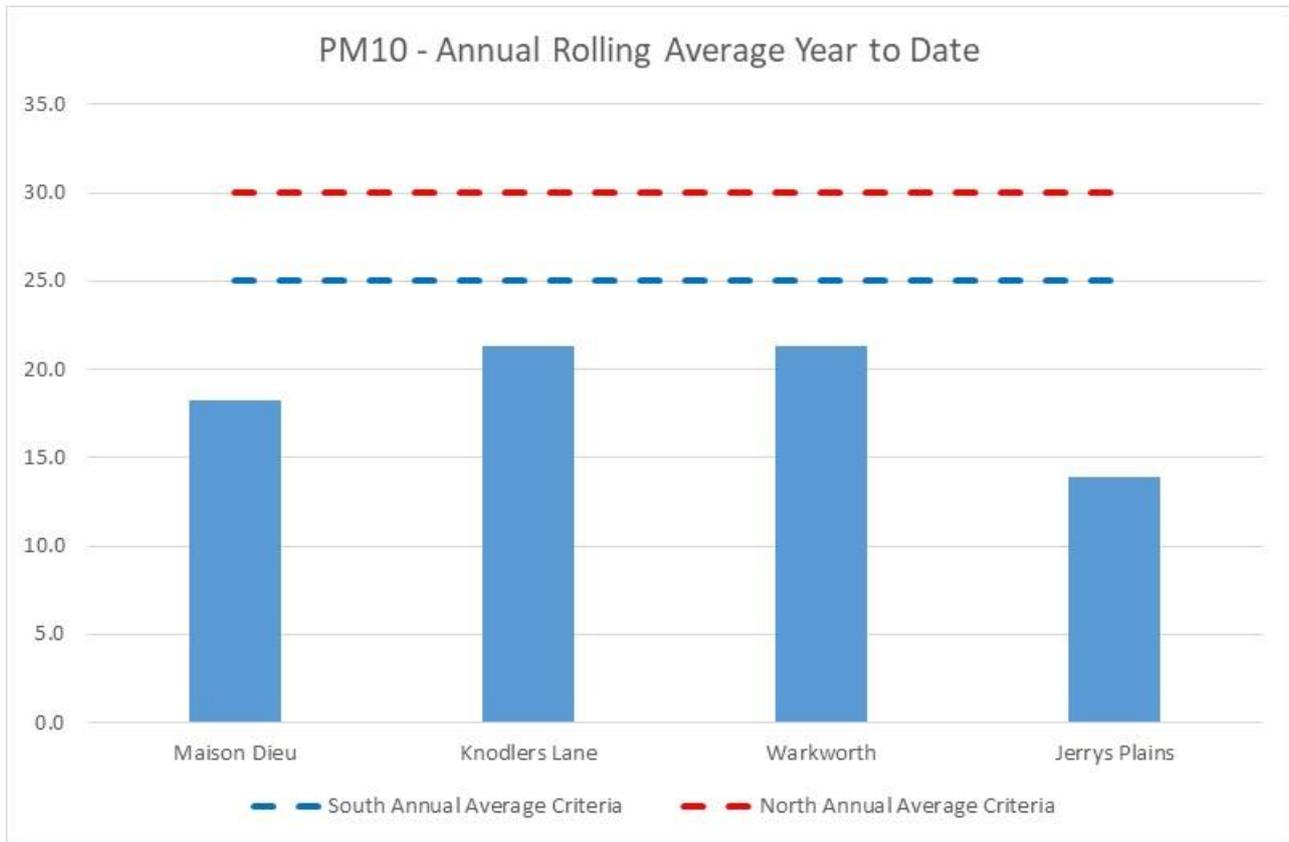

Figure 12 - Real Time PM<sub>10</sub> Annual Average at the end of the Reporting Period

### 2.3.5 Real Time Alarms for Air Quality

The real time monitoring system generated 49 automated air quality related alarms during the reporting period. 42 alarms related to adverse weather conditions and 7 alarms related to dust conditions.

## 3 Water Quality

HVO maintains a network of surface water and groundwater monitoring sites.

### 3.1 Surface Water

Surface watercourses are sampled on a quarterly sampling regime. Water quality is assessed through the parameters of pH, electrical conductivity (EC) and Total Suspended Solids (TSS). The location of surface water monitoring points across HVO are shown in **Figure 13**.

Results from monitoring on site dams, the Hunter River and other natural tributaries are provided in **Figure 14 to Figure 25**

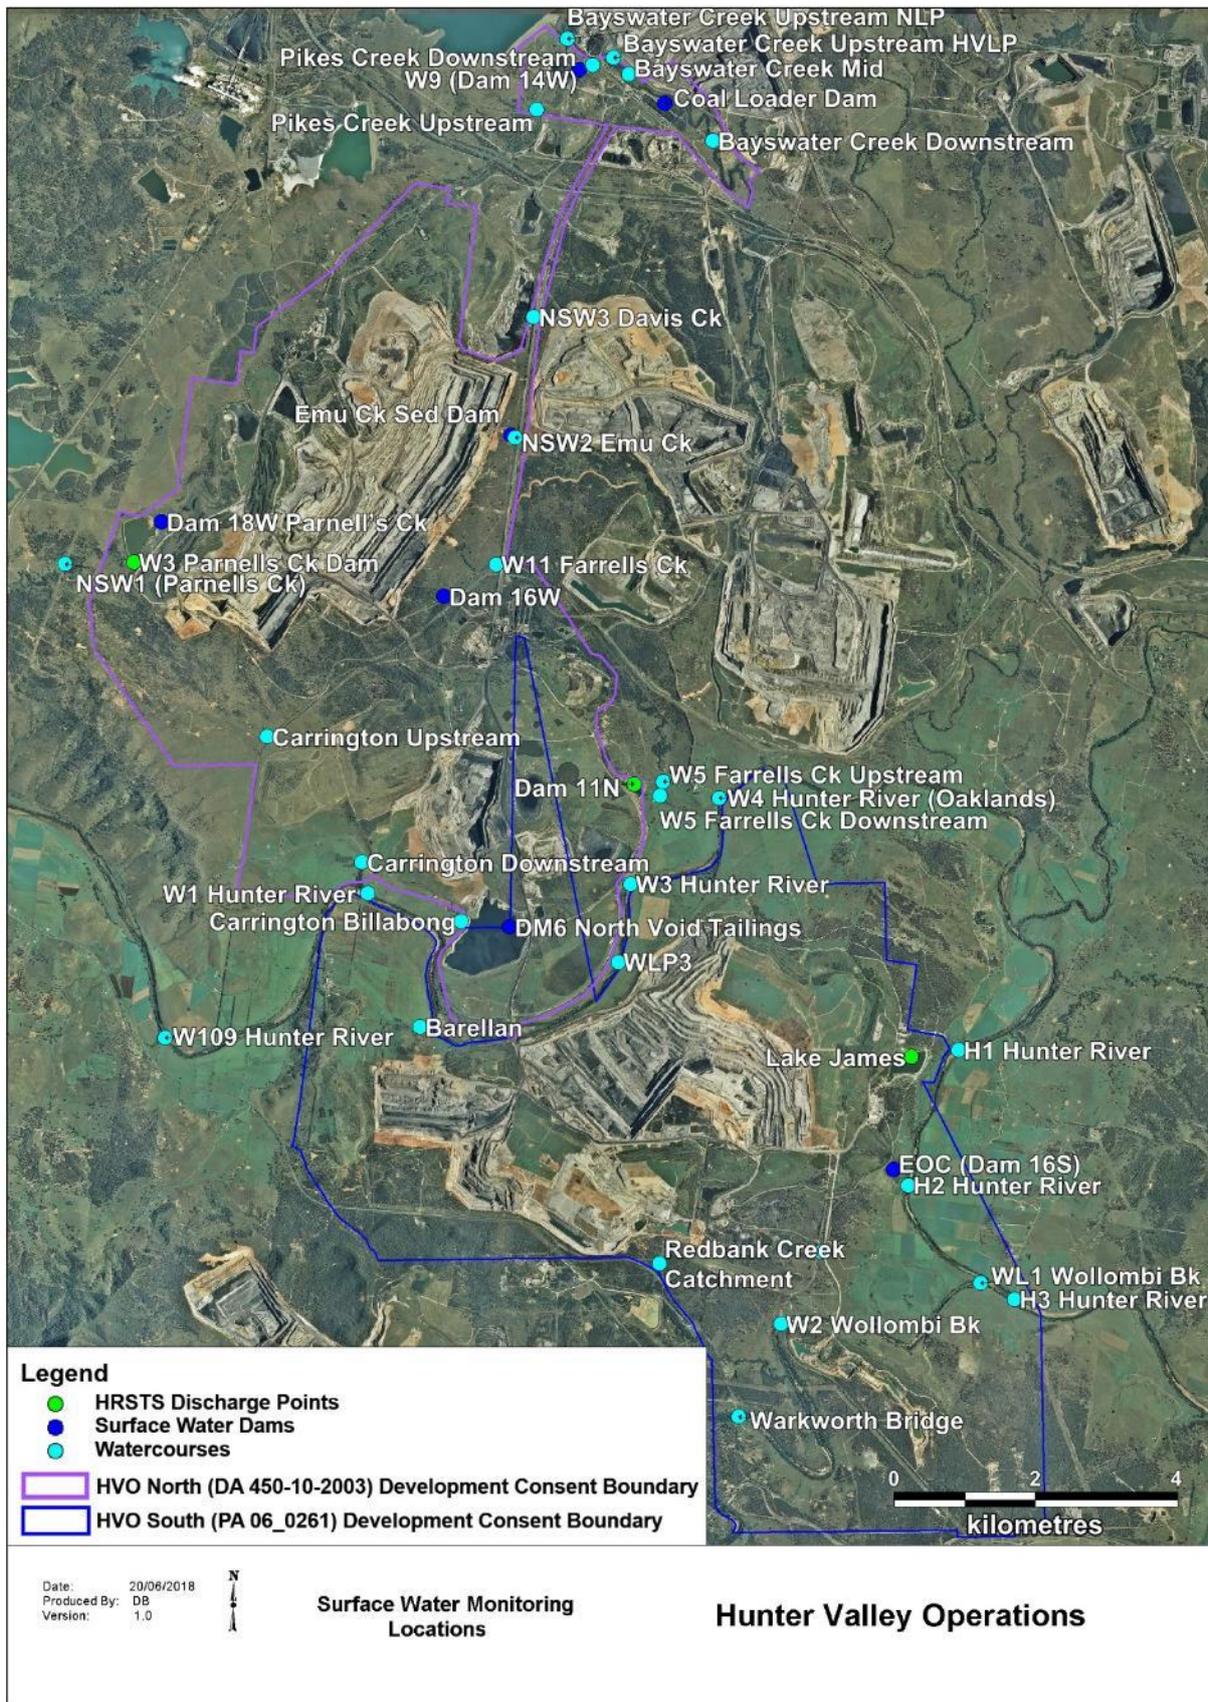

Figure 13 - HVO Surface Water Monitoring Locations

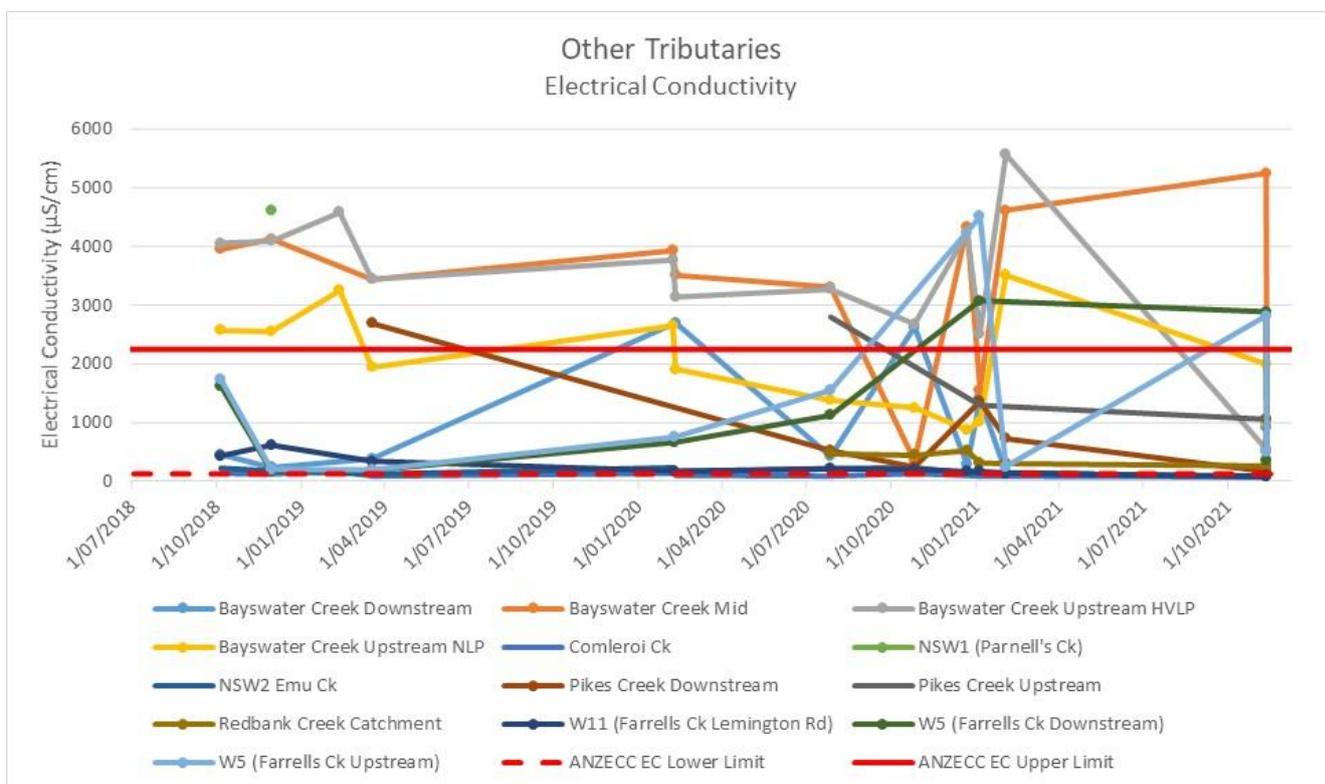

Figure 23 - Other Tributaries Electrical Conductivity - December 2021

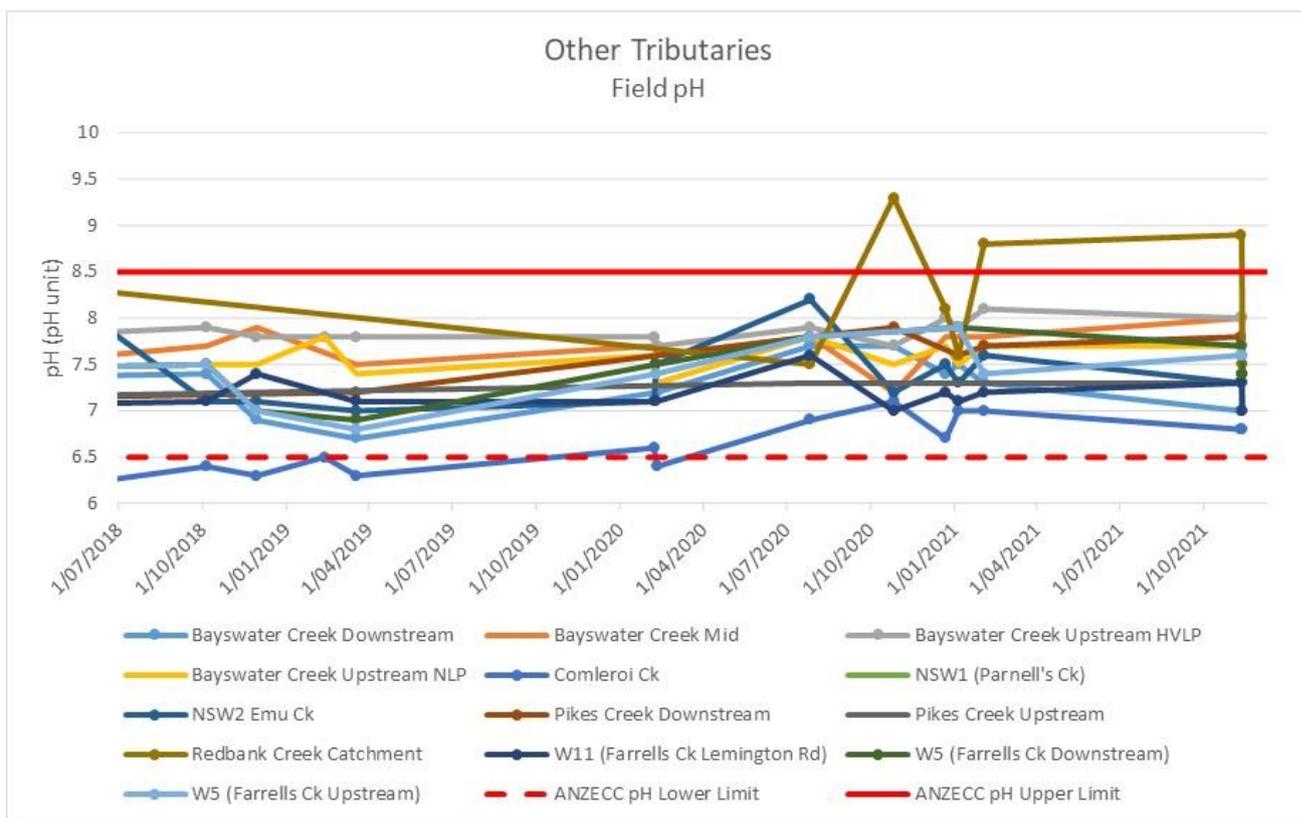

Figure 24 - Other Tributaries Field pH - December 2021

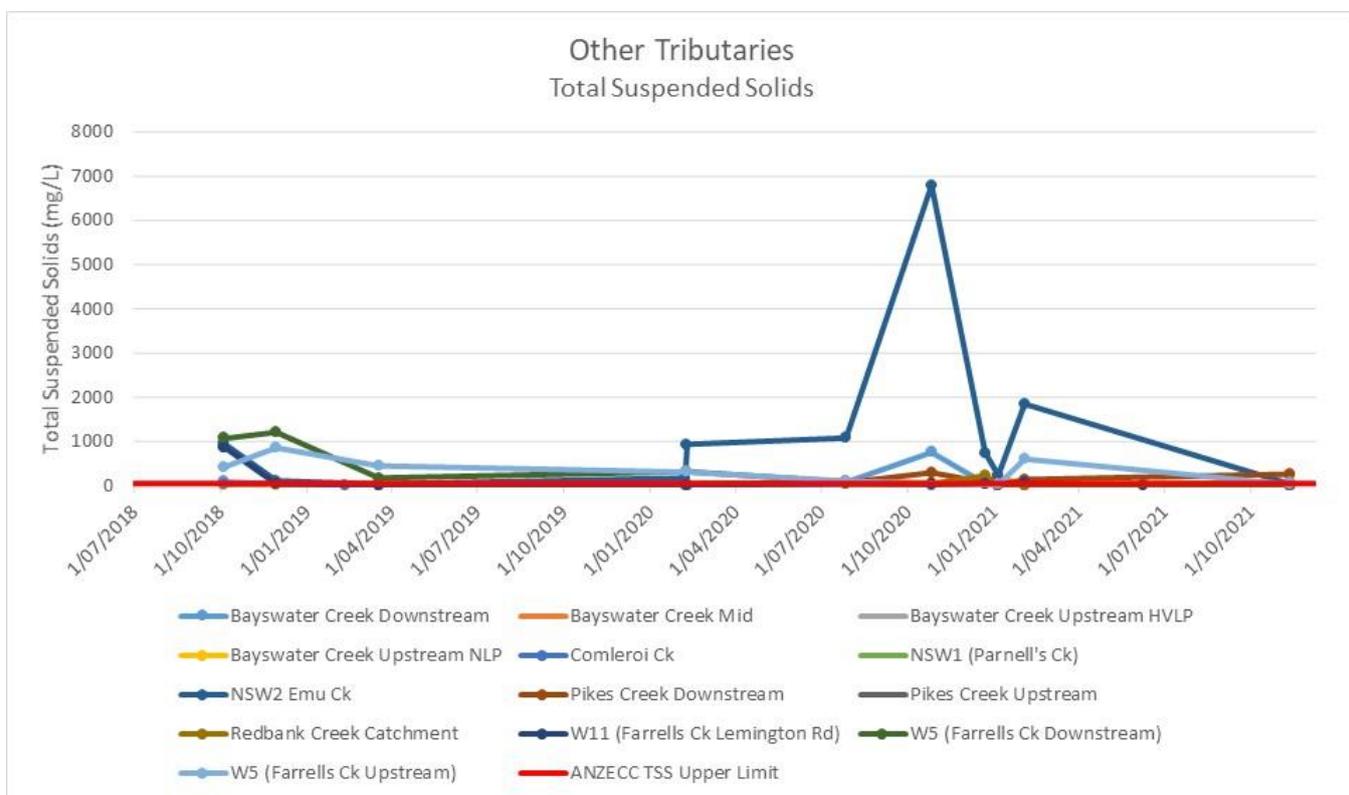

Figure 25 - Other Tributaries Total Suspended Solids - December 2021

### 3.1.1 Surface Water Trigger Tracking

Internal trigger limits have been developed to assess monitoring data on an on-going basis and to highlight potentially adverse surface water impacts. The process for evaluating monitoring results against the internal triggers and subsequent responses are outlined in the HVO Water Management Plan.

Surface water trigger tracking results are summarised in **Table 2**.

**Table 2 - Surface Water Trigger Tracking – Q4 2021**

Site	Date	Trigger Limit Breached	Response Action
Bayswater Creek Midstream	11/11/2021	EC	First consecutive trigger exceedance, Watching Brief*
Pikes Creek Downstream	11/11/2021	TSS	Second exceedance of TSS (264mg/L). Rain event sampling after 58mm of rain was recorded in the previous 24-hour period. Field observations indicate that the sample was taken from a pool of water as there was no visible flow in the creek line. Based on both of these factors, it can be assumed that the sample taken is not representative of flows in Pikes Creek and that there is no impact to suggest mining influence. The ephemeral nature of this monitoring location is the primary reason for considerable variation in physical water quality.
W11 (Farrells Ck Lemington Rd)	11/11/2021	TSS	Third exceedance of TSS (64mg/L). Rain event sampling after 58mm of rain was recorded in the previous 24-hour period. Field observations indicate that the sample was taken from an area of slow flow in the creek line. Based on both of these factors, it can be assumed that the sample taken is not representative of flows in Farrells Creek and that there is no impact to suggest mining influence. The ephemeral nature of this monitoring location is the primary reason for considerable variation in physical water quality.
Bayswater Creek Midstream	12/11/2021	pH	First consecutive trigger exceedance, Watching Brief*
W11 (Farrells Ck Lemington Rd)	12/11/2021	pH	First consecutive trigger exceedance, Watching Brief*
H2 – Hunter River	8/12/2021	TSS	Fourth breach of TSS trigger (54mg/L). Field observations indicate that the water at the sample site was slightly turbid when the sample was taken. H2 is a downstream surface water monitoring location. Water monitoring indicates that water quality is consistent with upstream

			results at W109 (55mg/L) and W1 (54mg/L) and the water quality expected in the Hunter River following rainfall in the 24 hours preceding monitoring. No evidence to suggest elevated TSS is associated with mining influence.
W109 – Hunter River	8/12/2021	TSS	First breach of TSS trigger (55mg/L). Field observations indicate that the water at the sample site slightly turbid when the sample was taken. W109 is an upstream surface water monitoring location. Results are generally consistent with observations and water quality expected in the Hunter River following rainfall in the 24 hours preceding monitoring. No evidence to suggest elevated TSS is associated with mining influence.
W1 - Hunter River	8/12/2021	TSS	Second breach of TSS trigger (54mg/L). Field observations indicate that the water at the sample site was slightly turbid when the sample was taken. W1 is an upstream surface water monitoring. Water monitoring indicates that water quality is consistent with upstream (W109 – 55mg/L) and downstream (H2 – 54mg/L) results and the water quality expected in the Hunter River following rainfall in the 24 hours preceding monitoring. No evidence to suggest elevated TSS is associated with mining influence.
W4- Hunter River	8/12/2021	TSS	First breach of TSS trigger (61mg/L). Field observations indicate that the water at the sample site was slightly turbid when the sample was taken. W4 is a downstream surface water monitoring location. Water monitoring indicates that water quality is consistent with upstream (W109 – 55mg/L) and downstream (H2 – 54mg/L) results and the water quality expected in the Hunter River following rainfall in the 24 hours preceding monitoring. No evidence to suggest elevated TSS is associated with mining influence.

### 3.2 Site Water Use

HVO is permitted to extract water from the Hunter River under water allocation licenses issued by Water NSW.

HVO did not extract water from the Hunter River during the reporting period.

### 3.3 HRSTS Discharge

HVO participates in the Hunter River Salinity Trading Scheme (HRSTS), allowing discharge from licensed discharge points Dam 11N (to Farrell's Creek), Lake James (to the Hunter River) and Parnell's Dam (to Parnell's Creek). Discharges can only take place subject to HRSTS regulations.

HVO discharged 350ML under the HRSTS during the reporting period.

### 3.4 Groundwater Monitoring Results

Groundwater monitoring is undertaken on a quarterly basis in accordance with the HVO Water Management Plan and Groundwater Monitoring Program. The location of groundwater monitoring points across HVO are show in **Figure 26**.

Groundwater monitoring results are provided in **Figure 27** to **Figure 80**

### 3.4.1 Groundwater Trigger Tracking

Internal trigger limits have been developed to assess monitoring data on an on-going basis and to highlight potentially adverse groundwater impacts. The process for evaluating monitoring results against the internal triggers and subsequent responses is outlined in the HVO Water Management Plan.

Groundwater trigger tracking results are summarised below in **Table 3**.

*Table 3 - Groundwater Trigger Tracking – Q4 2021*

Site	Date	Trigger Limit Breached	Response Action
CFW55R	12/10/2021	EC	Investigation Ongoing
BZ2A(1)	23/11/2021	pH	Investigation Ongoing
BZ3-3	23/11/2021	pH	Third consecutive trigger exceedance – investigation commenced
BZ4A(2)	23/11/2021	pH	Third consecutive trigger exceedance – investigation commenced
NPZ2	1/12/2021	EC	Investigation Ongoing
CFW55R	15/11/2021	EC	Investigation Ongoing
B631 (BFS)	3/12/2021	EC	Second consecutive trigger exceedance - watching brief established
C130(ALL)	3/12/2021	EC	Investigation Ongoing
C130 (WDH)	3/12/2021	EC	Investigation Ongoing
CFW57	2/12/2021	Water Elevation	First consecutive trigger exceedance - watching brief established

CGW53A	21/12/2021	Water Elevation	Investigation Ongoing
CGW55A	21/12/2021	Water Elevation	First consecutive trigger exceedance - watching brief established
CGW51a	21/12/2021	pH	Second consecutive trigger exceedance – watching brief established
CGW53	21/12/2021	pH	First consecutive trigger exceedance – watching brief established
CGW32	21/12/2021	EC	First consecutive trigger exceedance - watching brief established
GW106	21/12/2021	pH	First consecutive trigger exceedance - watching brief established

# 4 Blasting

HVO maintains a network of blast monitoring units located at nearby privately owned residences and function as regulatory compliance monitors. The location of these monitors can be found in **Figure 81**. Blasting criteria for HVO are summarised in **Table 4**.

**Table 4 - Blasting Criteria**

Airblast Overpressure ((L))	Comments
115	5% of the total number of blasts in a 12-month period
120	0% of blasts
Ground Vibration (mm/s)	Comments
5	5% of the total number of blasts in a 12-month period
10	0% of blasts

## 4.1 Blast Monitoring Results

Seventeen blasts were initiated at HVO during the reporting period. Blast monitoring results for the period are shown in **Table 5** and **Table 6**.

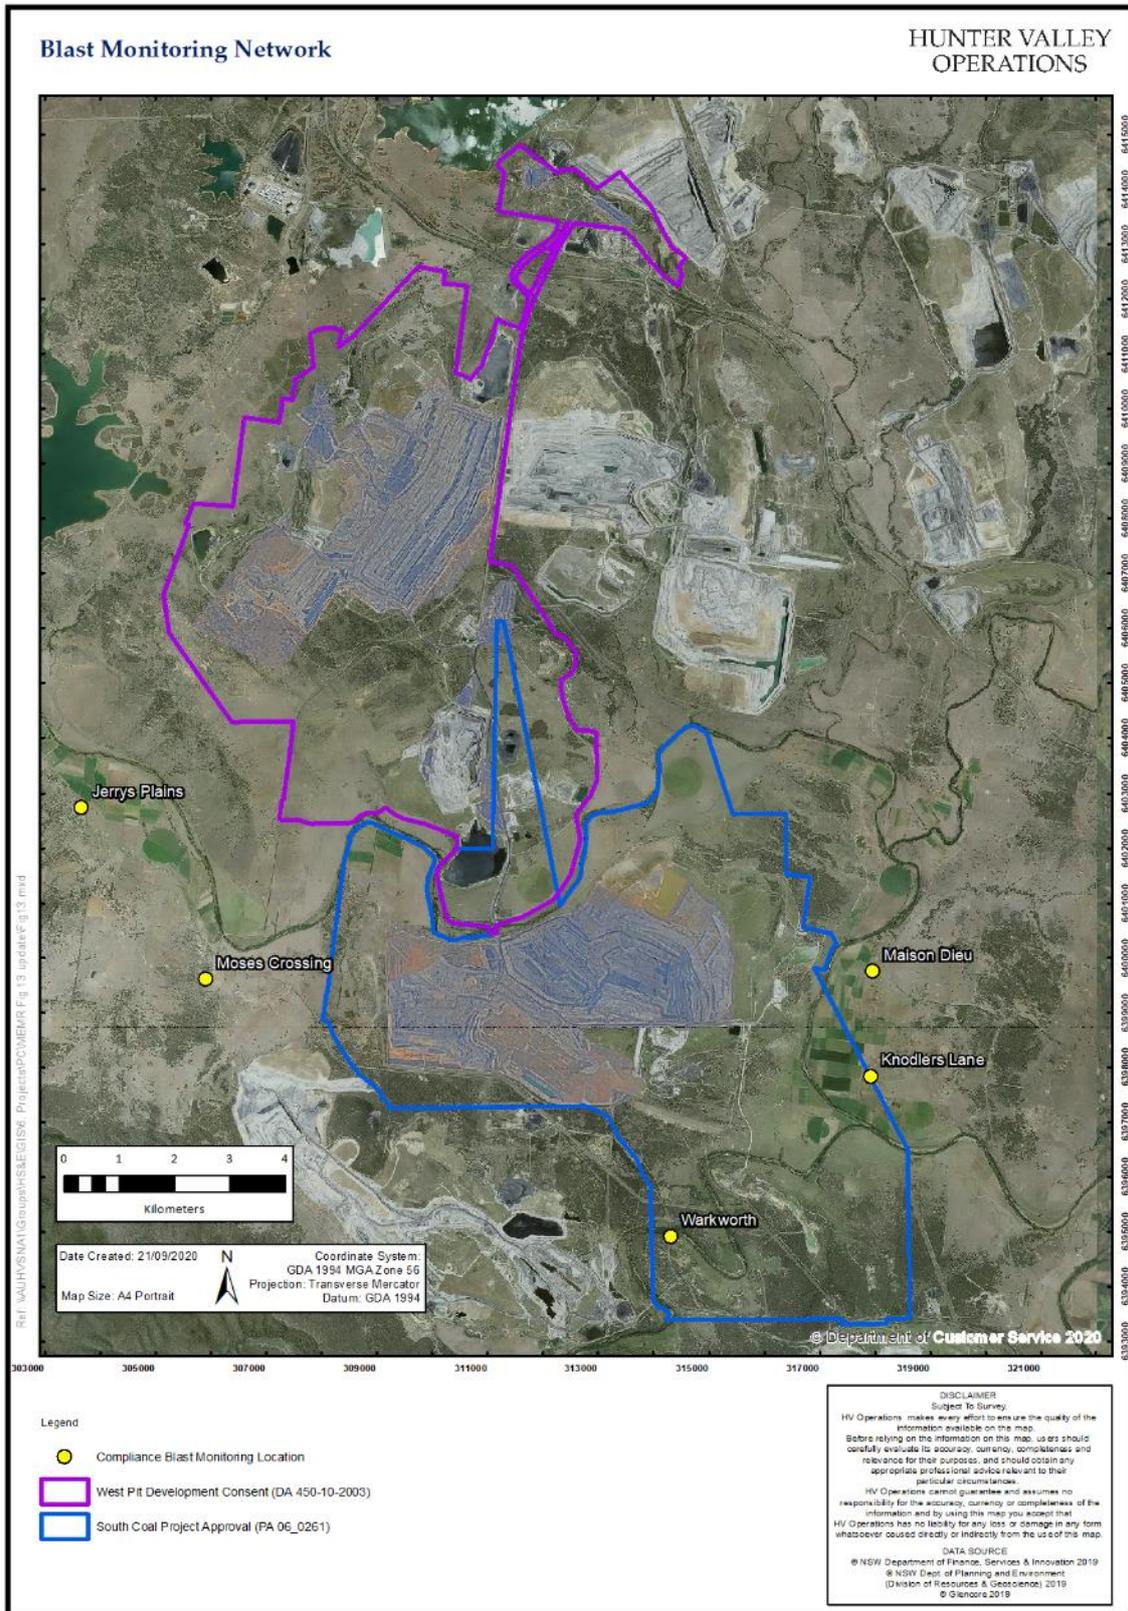

Figure 81 - Blast Monitoring Location Plan

## 5 Noise

Routine attended noise monitoring occurs at defined locations around HVO, as described in the HVO Noise Monitoring Program. The noise monitoring aims to quantify and describe the acoustic environment around the site and compare results with specified limits. The attended noise monitoring locations are displayed in **Figure 82**.

### 5.1 Attended Noise Monitoring Results

Attended monitoring was conducted at receiver locations around HVO on the night of 13 December 2021.

Monitoring results are detailed in **Table 7** to **Table 11**.

**Table 7 - LAeq,15minute HVO North Against Impact Assessment Criteria for the reporting period**

Location	Date and Time	Wind Speed (m/s) <sup>1</sup>	Stability Class	Criterion (A)	Criterion Applies <sup>2</sup>	HVO North LAeq <sup>3,4,5,6</sup>	Exceedance <sup>4,5</sup>

4. Bold results in red indicate exceedance of criterion;
5. NA in criterion column indicates no criterion is applicable at this location. NA in exceedance column means atmospheric conditions outside specified in approval therefore criterion not applicable.

## 5.2 Low Frequency Assessment

In accordance with the requirements of the EPA’s Noise Policy for Industry (NPfI), the applicability of the low frequency modification penalty has been assessed. No penalties were applied for monitoring undertaken through the reporting period. The assessments for the low frequency noise are shown in **Table 12** and **Table 13**.

**Table 12 - Modifying Factor Assessment HVO North for the reporting period**

Location	Date and Time	Measured HVO North $L_{Aeq}$	Criterion Applies?	Intermittency Modifying Factor?	Tonality Modifying Factor?	Frequency of Tonality <sup>1</sup>	Low-frequency Modifying Factor?	Maximum Exceedance of NPfI Reference Spectrum <sup>1,2</sup>	Total Penalty <sup>2</sup>

1. NA denotes 'not applicable'; and

2. Bold results indicate that application of NPFI modifying factor/s is required

### 5.3 Real Time Noise Monitoring

HVO utilises a network of real-time directional noise monitors to manage noise impacts on a continuous basis, shown in **Figure 82**. Noise alarms are in place at five monitoring locations (Knodlers Lane, Maison Dieu, Jerrys Plains, Moses Crossing, and Long Point) which alert HVO staff to elevated noise levels that require investigation.

HVO investigates and responds to noise alarms with appropriate modification to operations. Changes in response to a noise alarm can include replacing equipment with alternative units, changing or relocating tasks, or shutting down equipment. It should be noted that this assessment does not compliment or conflict with attended noise monitoring detailed in **Section 5.1**. Real time monitoring data includes non-mine noise sources such as animals, road traffic and weather.

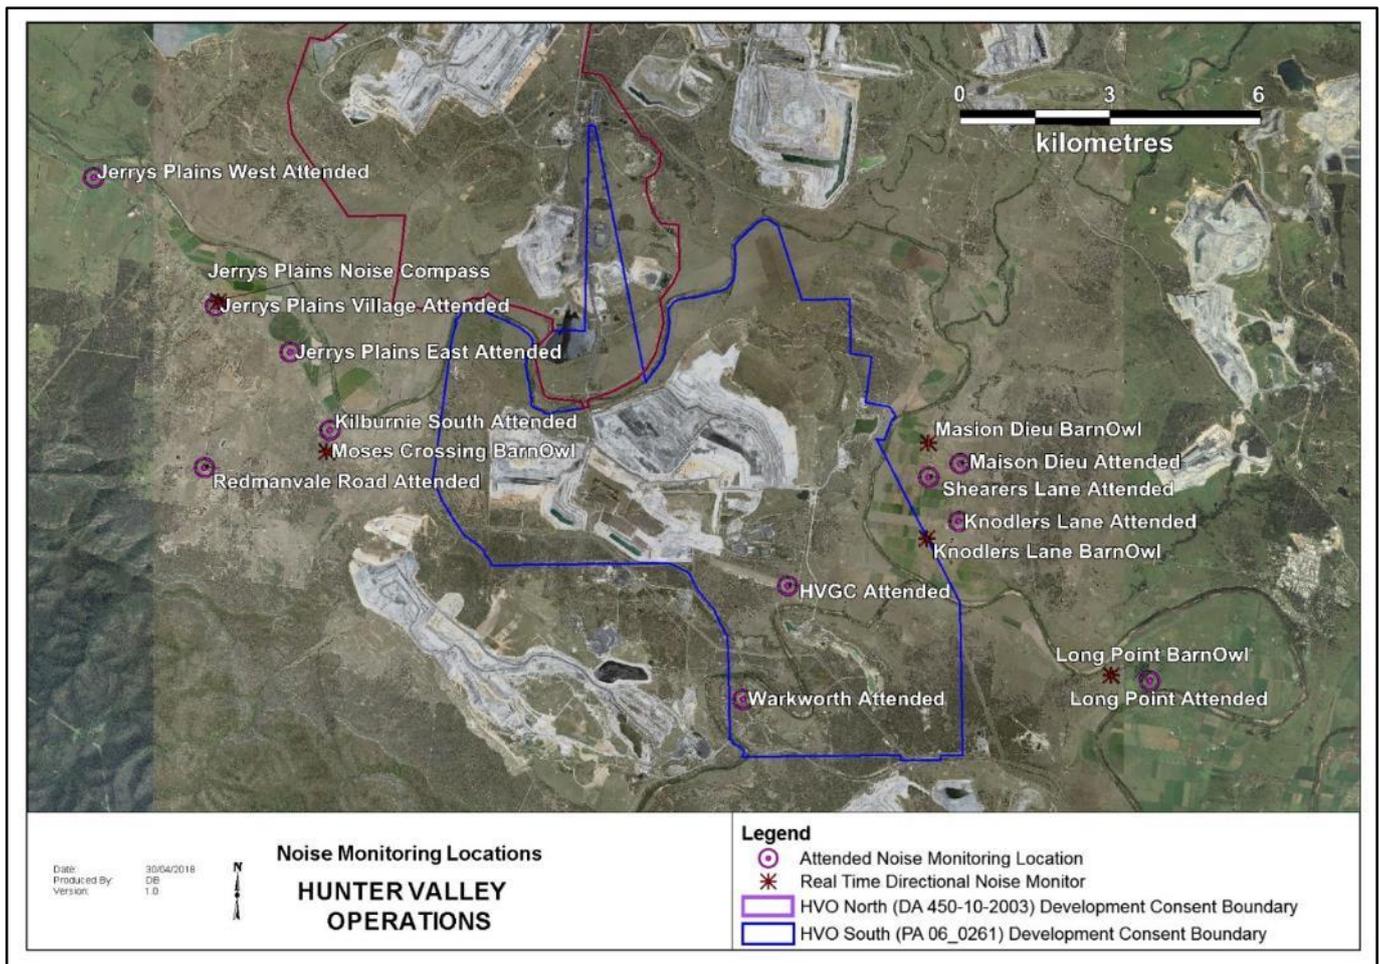

Figure 82 - Noise Monitoring Location Plan

## 6 Operational Downtime

A total of 289.4 hours of equipment downtime were logged in response to real time monitoring and inspections for environmental factors such as noise and dust during the reporting period. Operational downtime by equipment type is show in **Figure 83**. Note that these delays are instances where operations were completely stopped and does not include occasions where operations were changed/modified but not stopped (e.g. changed from exposed dump to in-pit dump).

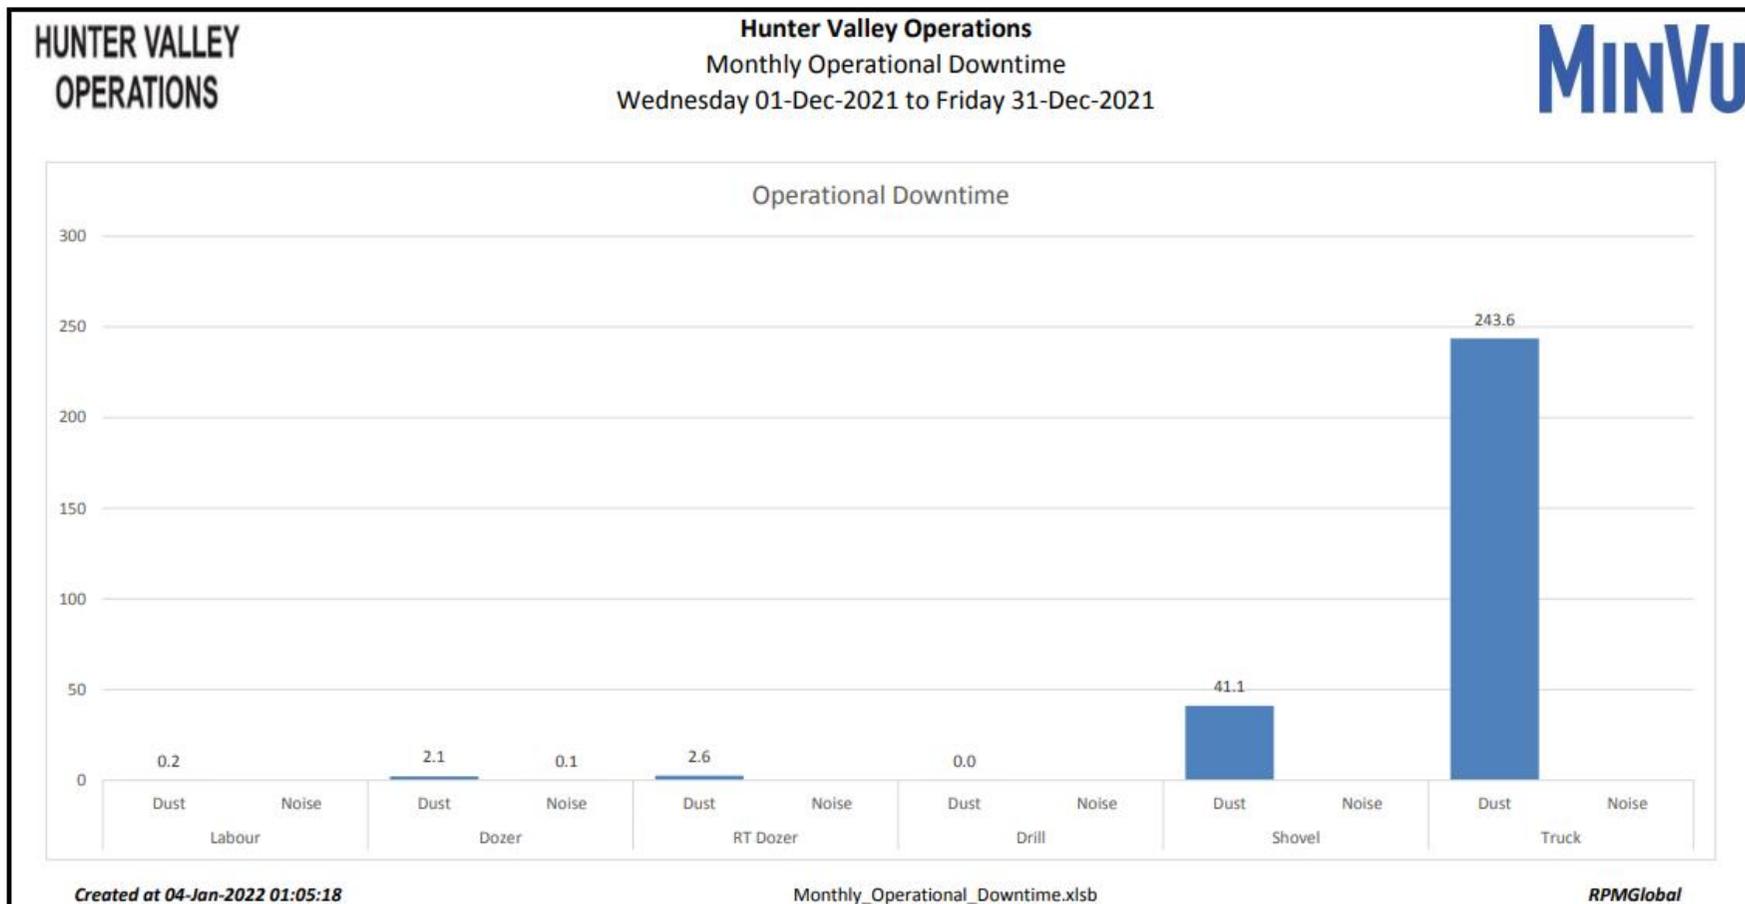

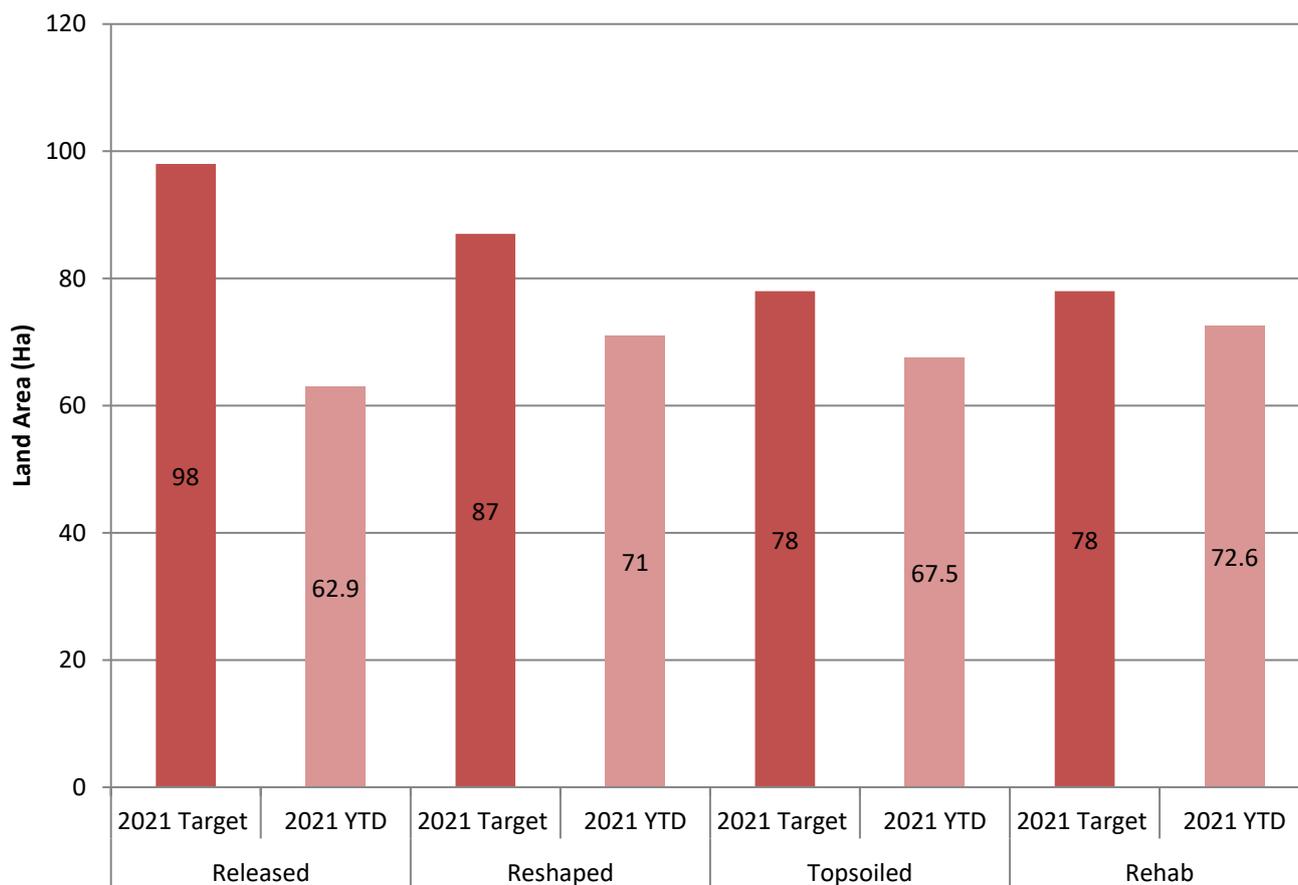

Figure 83 - Operational Downtime by Equipment Type for the reporting period

# 7 Rehabilitation

The following activities related to rehabilitation were completed during the reporting period:

- 1.57 Ha of land was reshaped
- 1.57 Ha of land was released (became available for the application of topsoil)
- 20.56 Ha of land was topsoiled
- 21.97 Ha of land was rehabilitated

Year to date progress is shown in **Figure 84**.

**Figure 84 - Rehabilitation YTD December 2021**

# 8 Complaints

One complaint was received during the reporting period. Details of complaints received are shown in **Table 14**.

**Table 14 - Complaints Summary 2021**

Month	Noise	Dust	Blast	Lighting	Other	Total
January	1	-	-	1	-	2
February	-	-	-	-	-	-
March	-	-	-	-	-	-
April	-	-	3	1	-	4

November	-	-	-	-	-	-
December	-	1	-	-	-	1
<b>Total</b>	<b>5</b>	<b>4</b>	<b>12</b>	<b>3</b>	<b>1</b>	<b>25</b>

## 9 Environmental Incidents

There was one reportable environmental incident during the reporting period:

- **9/12/2021 – Warkworth TEOM Miscapture**

The Warkworth TEOM produced 58% data capture for 9 December and 53% data capture for 10 December, less than the required 75% capture rate. The DPIE technician was contacted who confirmed that the failure was due to data logger lockup on the TEOM. DPIE was notified of the miscapture. The TEOM is not under the control of HVO.
